I am	I'm trying to	But	Because	Which makes me feel
Water quality analyser	find the quality of water by predicting it.	The quality of water varies from place to place .So im trying to use efficient algorithm to predict the quality of water effectively	water playing a major role for all the things that were happening around the world.So quality of water is necessary to know wether it is usable or not according to some chemical conditions in water	to create the water quality analyser predictor to help the people to know the water quality and make use of it according to their quality

New table

Problem Statement (PS)	I am	I'm trying to	But	Because	Which makes me feel
ps(1)	Water quality analyser	find the quality of water	Water sources vary from place to place	chemical condition varies	Difficult to predict
ps(2)	people	use water	affected by water borne disease	because it has unwanted minerals	unhealthy
